

1.5 Removal of strings and cushioning materials

To avoid damages to the parts, modules, and assemblies of the machine, the movable parts are fixed by white plastic ties and adhesive tape.

Also, the fragile parts, such as rubber rollers are protected with cushioning materials.

Remove these white plastic ties, adhesive tape, and cushioning materials before connecting the electrical power and dry air lines.

- * The white plastic ties, adhesive tape, and cushioning materials are for temporary fixing. Remove these in unpacking procedure.

- * Do not remove the black plastic ties for permanent fixing of wires, air pipes, and so on.

<Temporary fixing>

<Permanent fixing>
