

JEL Sorter原理手冊

NADA-ELITE

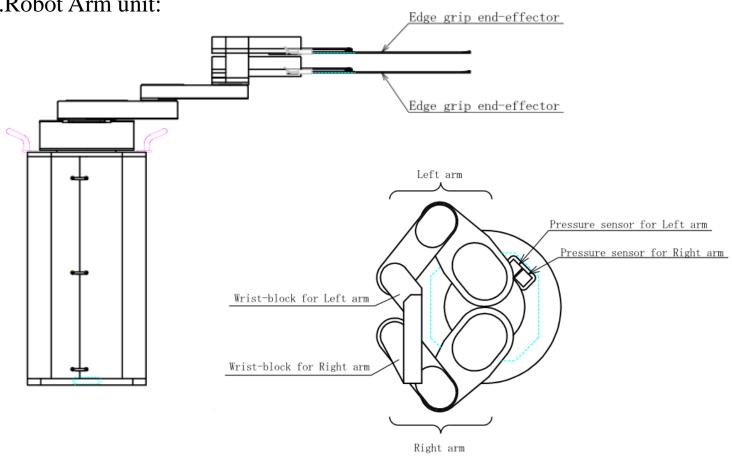

內容

- JEL Robot 硬體介紹說明
- JEL Robot 硬體調整說明
- JEL Robot controller介紹說明
- JEL Robot Teaching BOX 說明
- JEL Robot 軟體說明
- Flip操作說明
- Wafer-search 操作說明
- JEL SORTER Teach 點位規劃
- JEL SORTER Bank 點位規劃
- JEL SORTER macro 指令(I data)
- 上blade GET/PUT 校正相對位置
- 下blade GET/PUT 校正相對位置
- ROBOT POINT(正常片) DATA BACKUP
- ROBOT POINT(薄片) DATA BACKUP
- **GET/PUT** 動作原理

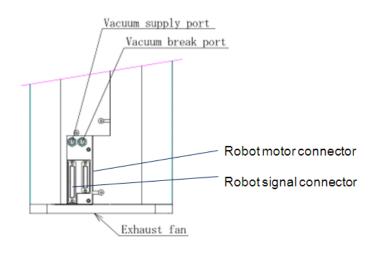

(一).Robot硬體簡介各部說明

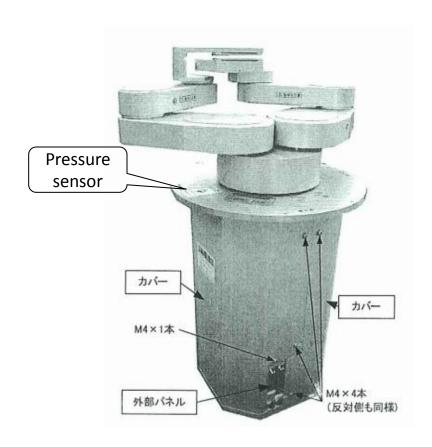

1.Robot Arm unit:

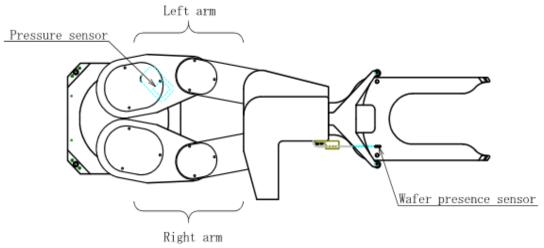

2.Robot 桶身

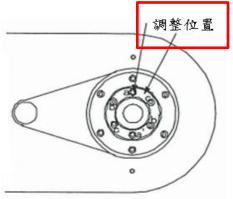

3.Arm unit:

3-1.Arm角度調整:

- a.執行完HOME
- b.鬆開各關節連接處螺絲
- c.調整關節角度,以符合B=A+C+D的長度

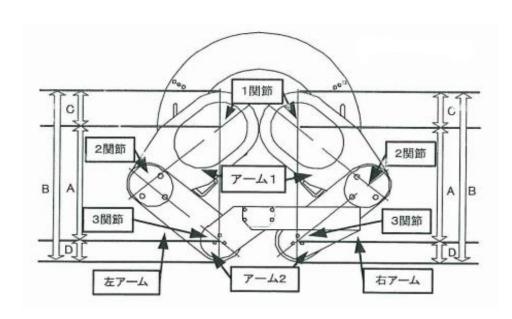

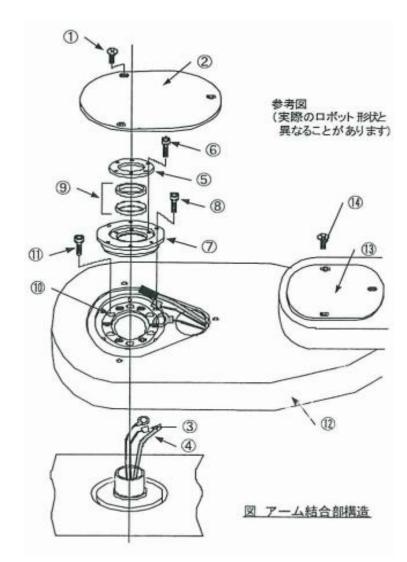

d.調整距離 B = A + C + D

A = 200 mm (標準)

D=2-關節,手臂寬度的一半

C=1-關節,手臂寬度的一半

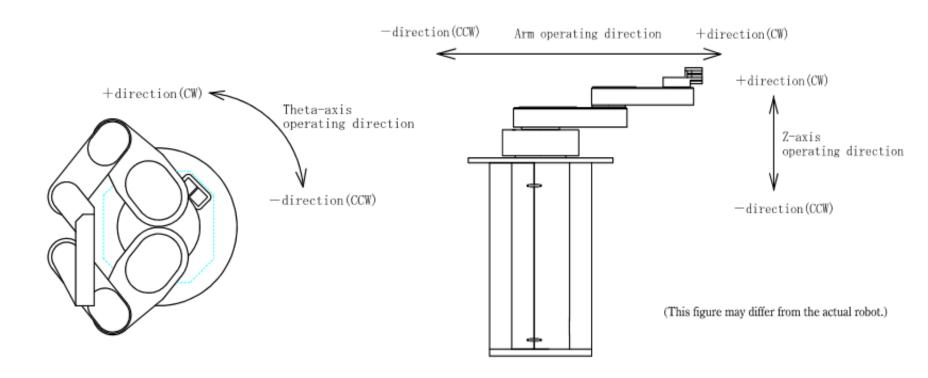

JEL Robot 硬體調整說明

- 4.Robot硬體水平確認調整
 - 4-1.Theta部分需R軸伸出360旋轉,確認0/3/6/9點鐘方向,各位置高度相當

(誤差0.6mm以下)

(二).Controller硬體/各部說明

1.控制器出廠設定分成A接點與B接點兩種

A接點 - 無須接Teaching box, Robot與controller即可通訊

B接點 - 必須接Teaching box, Robot與controller才可通訊

2.接點如下

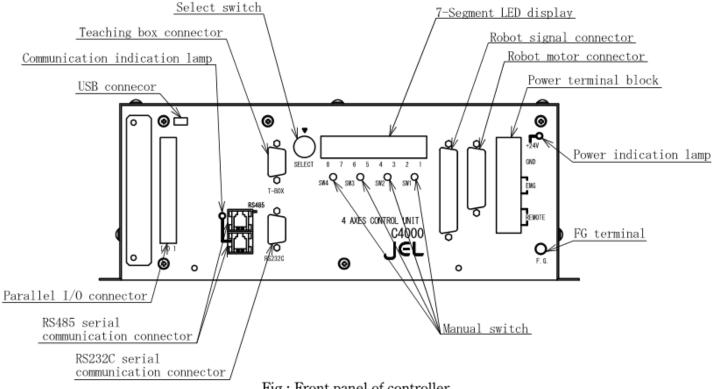

Fig.: Front panel of controller

3.控制器內部 Motor Driver配置 x 4 個(左至右)

$$J3 - (A2)$$
 $J4 - (Z)$

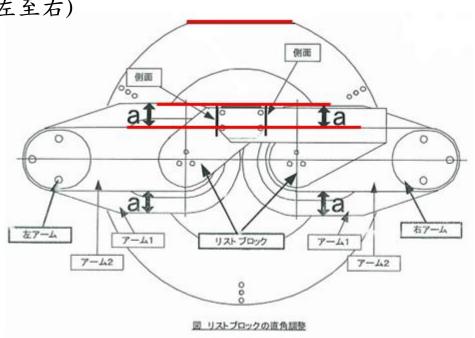

$$J4 - (Z)$$

J5 – (Track axis)

4.馬達更換注意事項

a.更換後,各軸手臂需先置中對齊 Arm-1/Arm-2的上下Arm重疊置中 並與Robot本體上板平邊切齊

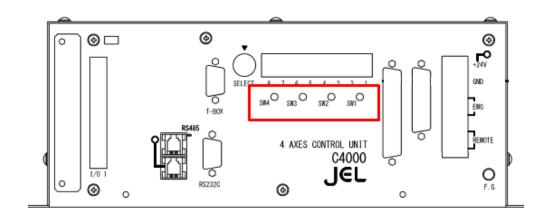

b.Driver需重新設定

當軸馬達Driver,長按Reset鍵至Home閃爍,再按一下Reset即設定完成

J1 - (Theta)
$$\rightarrow$$
 SW1
J2 - (A1) \rightarrow SW2
J3 - (A2) \rightarrow SW3
J4 - (Z) \rightarrow SW4

c. Motor電流檢測:

- c-1.Motor動作電流為motor出廠工作電流的80%.
- c-2.Motor停止電流為motor動作電流的50%.

5.Controller狀態顯示

0:通訊模式

1: Arm-1 (Right Arm) Encoder

2: Theta axis Encoder

3 : Arm-2 (Left) Encoder

4 : Z axis Encoder

5 : Status of alarm for Right arm

6: Status of alarm for Theta-axis

7: Status of alarm for Left arm

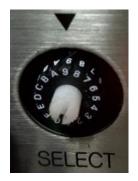

8 : Status of alarm for Z-axis

9: Status of sensor on Arm

A : Status of pressure sensor

B: I/O (Input)

C: I/O (Output)

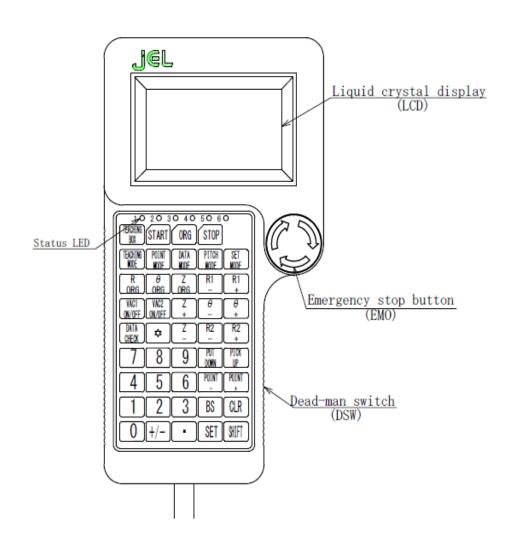

1.TEACHING BOX 操作說明 初始連結顯示 *Teaching box off* 確認EMO無按壓,按下 [LAGHIN] 進入 Teaching 畫面。

DSW switch 三段按壓開關, 按壓至中間位置使Robot移動。

TEACHING BOX

開啟Teaching BOX 通訊與關閉。

START

指定ROBOT到該Point的位置,按住執行動作,釋放停止動作。

ORG

慢速返回所有軸的原點,按住執行動作,釋放停止動作。

STOP

停止Robot動作。

TEACHING MODE

點位儲存模式。

POINT MODE

指定更改Point 及Bank 模式。

DATA MODE

指定Point代號,輸入各軸位置後儲存。

PITCH

更改Pitch,使用在cassettes teaching。

SET MODE

設定speed data 及 parameter data

按

SET MODE

切換 High speed /Low speed/Grow Time 。

DATA CHECK

顯示指定Point位置儲存的Data,在Teaching Mode有效。

CLR

清除或取消錯誤的Data執行,如位置超過極限。

BS

取消輸入的數據。

PUT PICK UP

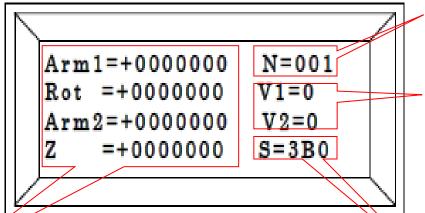

設定Get/Put 的行程。

SET

輸入後執行確定的按鍵,在Teaching mode 中用來暫存點位。

(一)Teaching mode 說明

各軸及時位置

Arm1 Arm2 Rot

單位:mm

Rot 單位:角度

依Type不同單位有所變動

儲存位置步驟
1.按 SET 確認暫存Data
2.按 SHFT + TEACHING 顯示
POINT
WRITING OK
[SET] OK
[OTHER] NG
按 SHFT 後顯示 WRITING COMPLETE
储存至EEPROM,斷電後Data不遺失。

指定的點位

V1= UP Arm 電磁閥狀態 V2= Low Arm 電磁閥狀態 當V1, 2=0, it is OFF 當V1, 2=1, it is ON

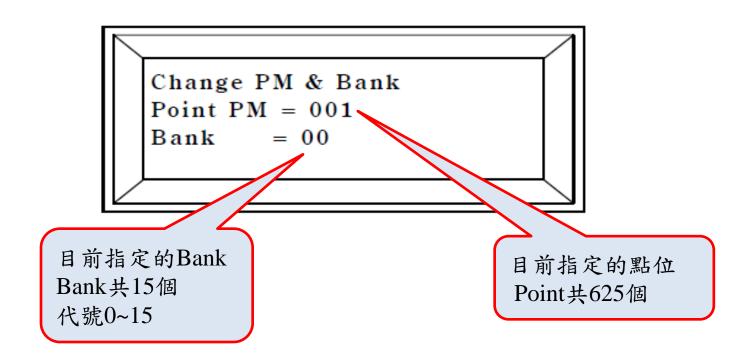

按 VAC1 VAC2 VAC2 VAC9 切換

3為手動Teaching時速度 設定 數字鍵1~5

B0 代表Bank number 為0

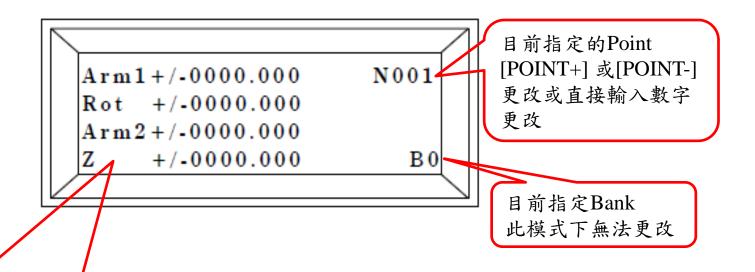

(二)Point mode 說明

- *[SET] 設定Data
- *[BS],[CLR] 取消輸入的Data

(三)Data mode 說明

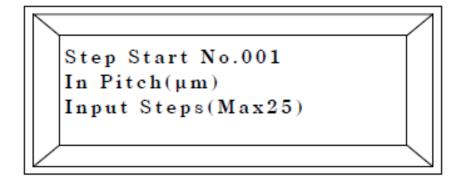

該Point各軸位置顯示,按[SET]鍵切換選擇到Z軸後再按[SET]鍵可暫時存入Data。

切換到Teaching Mode [SHIFT]+[TEACHING MODE] 鍵寫入EEPROM。

(四)Pitch mode 說明

	PITCH
6"	4760 <i>u</i> m
8"	6350 <i>u</i> m

In Pitch 設定單位為 "um" 1mm=1000 um Input Steps 最多可設30

輸入對應 cassette solt 之數量

(五)Speed setting mode 說明

Arm1 =	7000
Rot =	7000
Arm2 =	7000
Z =	6000

Fig.: Display of OH (High-speed data)

Arm1 =	100
Rot =	100
Arm2 =	100
Z =	100

Fig.: Display of OL (Low-speed data)

Arm1=	020
Rot =	050
Arm 2 =	020
Z =	050

Fig.: Display of OG (Grow time)

此模式設定 [SET MODE]按鍵切換

high-speed

low-speed

grow time

游標至Z Data後 [SET]按鍵做儲存

更改數值後[SHIFT] + [SET MODE]鍵寫入

EEPROM •

(六)Parameter setting mode 說明

```
No. = 000 Set Mode
VALUE = +000000000
MIN = +00000000
MAX = +00000000
```

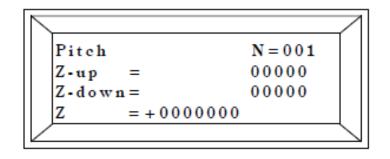

在Speed Setting Mode下 按[STOP] 切換到 Parameter setting mode

更改數值後,按下[SHIFT] + [SET MODE]鍵即寫入EEPROM。

警告: 非必要勿更改 Parameter

(七)Z-axis slight up/down setting mode 說明

$$Z-up = 5000$$

$$Z = 0$$

切換到Teaching Mode

同時按下

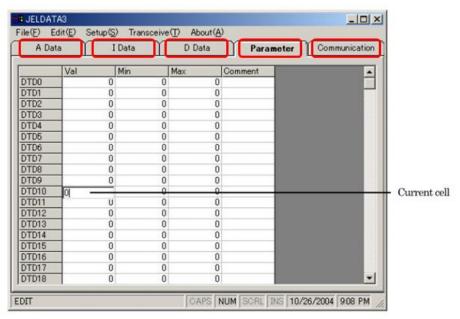

[SHIFT] + [TEACHING MODE] 鍵

即寫入EEPROM。

1.主畫面

Data 資訊分為[A data], [I data], [D data], [Parameter], [Communication]

[A data]:點位數據

[I data]:複合指令

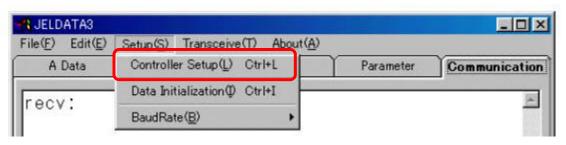

[D data]: Robot 速度參數

[Parameter]: Robot規格對應參數

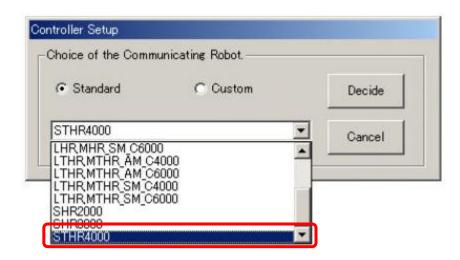

[Communication]:程式啟動時可與控制器通訊

2.Controller Setup:指定Robot控制器

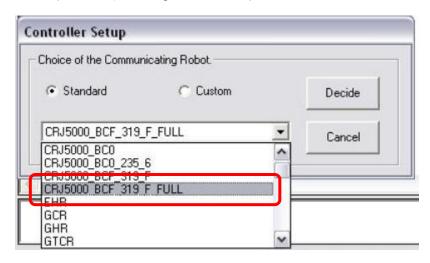

a.選定控制器型號

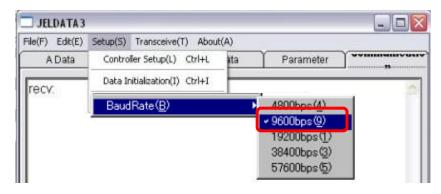

b.若不知型號亦可選定通用型: CRJ5000 BCF 319 F FULL

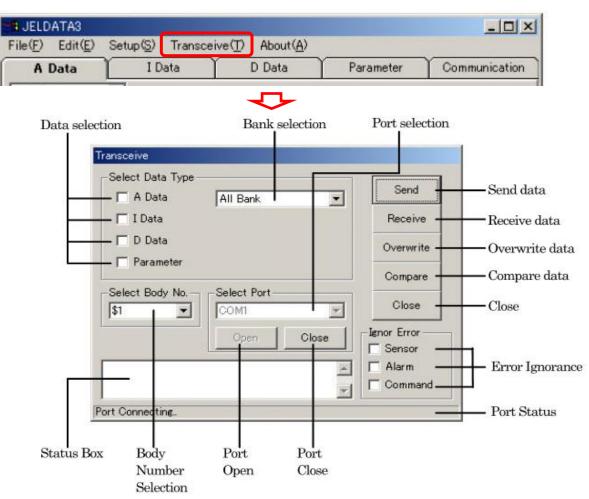

c.Baud rate設定:9600

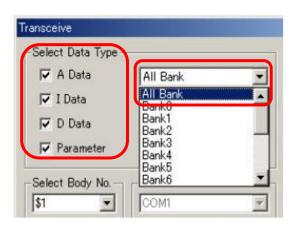

3. 傳送/接收檔案

a.選擇 Transceive

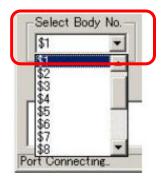

b.選擇所需Bank 勾選要傳送或接收的data

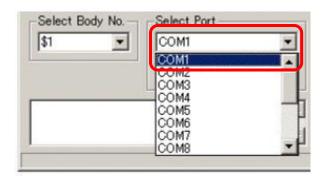

c.選擇Body No

d.選擇通訊port

e.Receive

開始upload

f.Send

開始download

Flip 操作說明

(一)Teaching mode 說明

進入Flip 操作畫面按 I MINE 顯示Point mode

,再按一次 [顯示Flip操作畫面,使用 teach pendant 數字按鍵,選擇按 [1]=ARM1

,按[2]=ARM2 ,進入Flip teaching mode

按0: Flip FIND HOME ENCODER歸0

按1~4: 到指定teach point 1~4位置

按5: Flip 順時針轉慢速,放開按鈕後停止

按6: Flip 逆時針轉慢速,放開按鈕後停止

按7: Flip 順時針轉正常速度,放開按鈕後停止

按8: Flip 逆時針轉正常速度,放開按鈕後停止

```
Change PM & Bank
Point PM =001
Bank =00
Point =>Rotary Set
```

```
**Rotary Teach**
Key[1]=ARM1
Key[2]=ARM2
Other=TCH MODE
```

* ARM1: Upper end-effector (Right arm)

* ARM2: Lower end-effector (Left arm)

```
**ARM1 Rotary**
7,8(5,6) CW, CCW Jog
1,2,3,4 'Move Point
0 -Org Shift=>Set
```

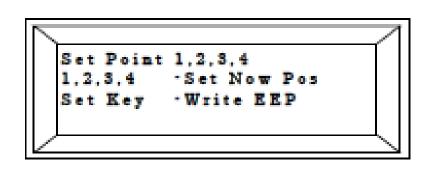

Flip teaching mode

Flip 操作說明

(二)set mode 說明

使用teaching mode 移動Flip 角度到翻轉位 置角度後,按[SHIFT]按鍵進入set mode

[SHIFT]+[1] 按鍵 →儲存在POINT 1

[SHIFT]+[2] 按鍵 →儲存在POINT 2

[SHIFT]+[3] 按鍵 →儲存在POINT 3

[SHIFT]+[4] 按鍵 →儲存在POINT 4

[SHIFT]+[SET] 按鍵 →儲存在EEPROM

按 離開回 robot teach mode

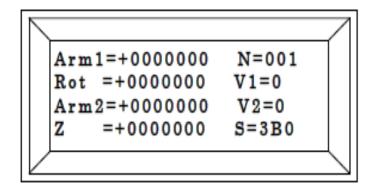

Set mode

JEL SORTER 使用

(一) Teaching scan sensor 位置

 Change PM & Bank
Point PM = 001
Bank = 00

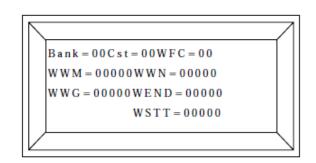

[SHIFT]+[SET] 按鍵 →儲存在EEPROM

(二) Data setting for wafer-search (1)

按[SHIFT]+[DATA CHECK] 進入Wafer-search data setting

Bank (bank)=0~F

Cst (cassette No.) =1

WFC (Number of cassette slots) =25

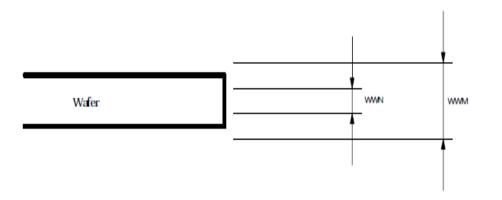

WWM (最大偵測厚度)=3000 um

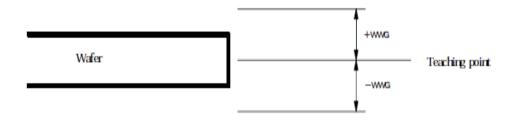

WWN (最小偵測厚度)=400um

WWG (sensor偵測範圍)=2000um

WEND (偵測停止位置)=5000um

WSTT (確認sensor開始位置)=0um

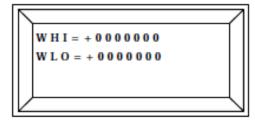

(二) Data setting for wafer-search (2)

再按一次[SHIFT]+[DATA CHECK]進入 Wafer-search data setting (2)

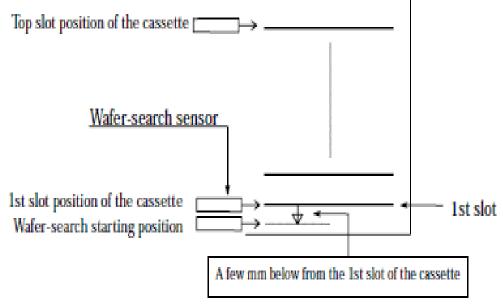

WHI (top slot position of the cassette)

=+um slot 25 Z軸高度

WLO (1st slot position of the cassette) Top slot position of the cassette [

=+um slot 1 Z軸高度

Fig.: Display2 of wafer-search data setting

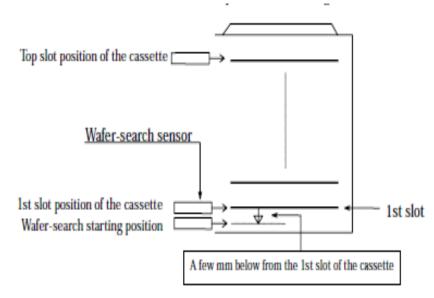

(三) 儲存Data setting for wafer-search (2)

WHI=+um slot 25 Z軸高度

WLO=+um slot 1 Z軸高度

No.	Key	Data setting	Contents
1	[SHIFT] + [0]	Cassette1 - WLO	Z-axis coordinates at the key operation is set to "WLO of the cassette 1".
2	[SHIFT] + [1]	Cassette1 - WHI	Z-axis coordinates at the key operation is set to "WHI of the cassette 1".
3	[SHIFT] + [2]		Z-axis coordinates at the key operation is set to "WLO of the cassette 2".
4	[SHIFT] + [3]	Cassette2 - WHI	Z-axis coordinates at the key operation is set to "WHI of the cassette 2".
5	[SHIFT] + [4]		Z-axis coordinates at the key operation is set to "WLO of the cassette 3".
6	[SHIFT] + [5]	Cassette3 - WHI	Z-axis coordinates at the key operation is set to "WHI of the cassette 3".
7	[SHIFT] + [6]	Cassette4 - WLO	Z-axis coordinates at the key operation is set to "WLO of the cassette 4".
8	[SHIFT] + [7]	Cassette4 - WHI	Z-axis coordinates at the key operation is set to "WHI of the cassette 4".
9	[SHIFT] + [8]		Z-axis coordinates at the key operation is set to "WLO of the cassette 5".
10	[SHIFT] + [9]	Cassette5 - WHI	Z-axis coordinates at the key operation is set to "WHI of the cassette 5".

(四) wafer-search 測試

- 2.按[SHIFT]+[START] robot mapping完成。
- 3.Wafer-search 結果顯示

0:空slot

1:有wafer

E: error(超出參數設定)

4.按[CLR]回teaching mode

5.按[SHIFT]+[+/-]回wafer-search結果

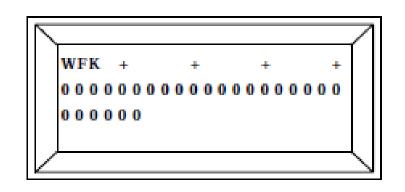

Fig.: Display of wafer-search result

Data save→

=> [SHIFT] + [TEACHING MODE]

6" JEL SORTER Teach 點位規劃

Teaching Point	上b	olade	下blade			
	GET (LOW)	PUT (HIGH)	GET (LOW)	PUT (HIGH)		
	Slot (1~25)	Slot (1~25)	Slot (1~25)	Slot (1~25)		
正FLIP	26~50	56~80	326~350	356~380		
反FLIP	86~110	116~140	386~410	416~440		

JEL SORTER Bank 點位規劃

\$1BC→讀取現在的BANK

\$1BC2→設定現在使用的BANK為2 BANK設定0~F

E	BANK	ALIGN	PORT A	PORT B	PORT C
上 blade	Cst1 正常 WAFER	5	2	3	4
	Cst2薄 wafer	5	6	7	8
 	Cst1 正常 WAFER	С	9	Α	В
blade	Cst2薄 wafer		D	E	F
